Design of DP Solutions for UNIX using NBU 5.0

- B. Applications running on the Windows clients will be suspended until all backups are complete.
- C. Slow network response time
- D. Lotus Notes e-mail messages may be delayed due to the congested network.

Answer: C, D

QUESTION: 101

You are going to implement NetBackup in the following environment:

There are 20 clients with a total of 2.4 TB of data.

The largest three clients have 400 GB of data each. The network is 1-gigabit.

The backup window is eight hours.

You have one robot with four SDLT320 drives with an expected throughput of 25 MB/s each.

You have been tasked to minimize the cost of the solution.

What is the minimum configuration you should plan for?

- A. Share the tape drives on a SAN, use SSO, and add a dedicated media server to the environment
- B. Back up all clients on the master server and do not add any media servers to the environment
- C. Purchase a disk array, back up to disk and use disk staging to move backups to tape as time allows
- D. Share the tape drives on a SAN, use SSO, and make the three largest clients SAN media servers

Answer: B

QUESTION: 102

Which command can be run to display Media Manager processes?

- A. vmpps
- B. vmpps -as
- C. bpps
- D. bpps -ps

Answer: A

QUESTION: 103

The number and throughput of network interfaces and host bus adapters are available for a media server. Assuming that sufficient network bandwidth exists, which two additional

items of information are necessary to determine the backup rate of the media server?
(Choose two.)

- A. Number of tapes available in the tape library
- B. Number of tape drives per HBA
- C. Tape drive throughput
- D. Tape drive position in the tape library

Answer: B, C

QUESTION: 104

You are designing a NetBackup environment. You will be using an external (non-NetBackup) scheduling product to initiate the jobs from the Master Server. Which three NetBackup features will be available in this configuration? (Choose three.)

- A. Cumulative incremental backup
- B. Automatic retry of failed jobs
- C. multistreaming
- D. Multiplexing

Answer: A, C, D

QUESTION: 105

Which two features are provided by the Block Level Incremental backups for Oracle databases feature in NetBackup 5.0? (Choose two.)

- A. Perform block level real-time replication to a disaster recovery database
- B. Reduce backup time by backing up only changed blocks
- C. Manipulate data blocks within the Oracle database
- D. Perform full, differential incremental, and cumulative incremental backups

Answer: B, D

QUESTION: 106

Which VERITAS product enables hierarchical storage management (HSM) of data?

- A. NetBackup Enterprise Server
- B. Storage Migrator for UNIX
- C. Backup Exec for Windows NT/2000
- D. Shared Storage Option

Answer: B

QUESTION: 107

Which NetBackup 5.0 option provides for using Oracle RMAN for database backup?

- A. NetBackup for Databases 5.0
- B. NetBackup Hot Backup 5.0
- C. NetBackup for Oracle 5.0
- D. NetBackup RMAN 5.0

Answer: C

QUESTION: 108

You are designing a new backup infrastructure. Your main application is an Oracle database running on a Solaris server. The database file systems are mounted from a Network Appliance filer. Which is a correct statement for NetBackup for Oracle?

- A. NetBackup for Oracle provides its own services provided by VERITAS and stops the databases before backups occur.
- B. NetBackup for Oracle does not provide a library for your databases.
- C. NetBackup for Oracle provides a library that may be statically or dynamically linked with the database vendor backup tool to provide the functionality called by the API.
- D. NetBackup for Oracle provides single instance backups of the database itself.

Answer: C

QUESTION: 109

You are given a requirement that raw data cannot be transmitted across the network during a backup and tapes must have an internal level of security. Which NetBackup 5.0 option provides this functionality?

- A. NetBackup SSH 5.0
- B. NetBackup Encryption Option 5.0
- C. NetBackup Security Option 5.0
- D. NetBackup Secure Transport 5.0

Answer: B

QUESTION: 110

What is provided by the NetBackup 5.0 Enterprise Server FlashBackup feature?

- A. Raw backup with single file restore
- B. Hot backups of databases
- C. Backups with checkpoint restarts
- D. Backups using snapshots

Answer: A
