Adobe LiveCycle ES Application Developer

QUESTION: 57

Which three technologies are used to create digital signatures? (Choose three.)

- A. hashing
- B. encryption
- C. biometrics
- D. polygraphs
- E. digital certificates

Answer: A, B, E

QUESTION: 58

For what reason does the encryption of the message digest provide the ability to validate the identity of the signer.

- A. Because only specified, known users can sign a PDF document.
- B. Because the credentials are always issued by a trusted third party.
- C. In order to create a digital signature the signer requires access to the recipient public key
- D. In order to create a digital signature, the signer requires access to the private key and the key password

Answer: D

QUESTION: 59

Which three are input properties of the ExportPDF operation found under the Generate PDF service? (Choose three.)

- A. An input document representing the PDF to be converted.
- B. A string value that represents the name of the input document.
- C. ConvertPDFFormatType value that represents the target file format.
- D. A string value representing a configuration file that contains the settings to be applied to the target document.

Answer: A, B, C

QUESTION: 60

The Assembler service enables the manipulation of PDF documents in a process. On what is the PDF manipulation based?

- A. the DDX file
- B. the PDF file settings
- C. the PrintPDFPackage
- D. the AssembleDDX variable

Answer: A

QUESTION: 61

You want to create a PDF document from a Microsoft Word document that conforms to PDF archive specifications. What should you do?

- A. select the toPS operation found under the Convert PDF service and include the Postscript level string setting PDF/A as an input variable
- B. select the createPDF operation found under the Generate PDF service and include the Adobe PDF string setting PDF/A as an input variable
- C. buy LiveCycle ES Output Server since PDF Generator CANNOT create a PDF that follows the archive specifications from a Word document
- D. select the createPDF operation found under the Generate PDF service and include the Adobe PDF string setting PDF/A as an input variable

Answer: B

QUESTION: 62

You have included the following DDX file as input to the invokeDDX operation:

```
<?xml version="1.0" encoding="UTF-8"?>
<DDX xmlns="http://ns.adobe.com/DDX/1.0/">
<PDF result ="Doc4">
<PDF source = "Doc2" pages="1-3"/>
</PDF> </DDX>
```

What happens as a result of doing this?

- A. Pages 1 to 3 will be extracted from Doc4. The key identifier for this command file will be Doc4.
- B. An exception would occur and NO result file would be produced, since this is NOT a valid DDX file.
- C. Doc2 and Doc4 will be assembled together. The key identifier for this assembled document will be Doc4.
- D. Pages 1 to 3 will be extracted from Doc2 and placed in Doc4. The key identifier for this assembled document will be Doc4.

Answer: D

QUESTION: 63

You want to retain the validity of digital signatures when assembling multiple files. What should you do?

- A. Add the save="WithSignature" attribute to the PDF result element of the DDX file.
- B. Add the <allowSig> tag to the base document and make that document the result output.
- C. Add the <PackageFiles> tag to the source documents being assembled as a PDF Package.
- D. Add the <NoForms> tag to all documents that do not have digital signatures associated with the document.

Answer: C

QUESTION: 64

Which data type is returned when the Assembler service returns a set of documents or document?

- A. a document list
- B. a document variable
- C. an AssemblerMap object
- D. an AssemblerResult object

Answer: D

QUESTION: 65

You are using the OCR option. Which three ways represent how you can specify the PDF output styles? (Choose three.)

- A. formatted rich text
- B. a searchable image
- C. a searchable image (Exact)
- D. formatted text and graphics

Answer: B, C, D

QUESTION: 66

You are creating a fragment. In which location do you have the option to create the fragment?

- A. The Fragment Library.
- B. The current document.
- C. The Fragment Library and the current document.
- D. The Fragment Library/Repository or the current document.

Answer: D

QUESTION: 67

Which is the correct syntax representing a fragment reference as viewed within the XML source of the template?

- A. <subform usehref=?template.form1.subformName(..\fragments\FileName.xdp)?>
- B. <subform usehref=?.\fragments\FileName.xdp#som(\$template.form1.subformName)?/>
- C. <subform usehref=?template.form1.subformName?..\fragments\FileName.xdp</subform>
- D. <subform usehref=?.\fragments\FileName.xdp?som(\$template.form1.subformName)</subform>

Answer: B

QUESTION: 68

You are validating a document signature created with a self signed certificate by using LiveCycle Digital Signatures ES. Which two statements about which configuration must exist in the Trust Store are true? (Choose two.)

- A. The credential of the signer must reside in the Trust Store.
- B. The Trust for Identity certificate trust setting must be enabled.
- C. The Trust for signature certificate trust setting must be enabled.
- D. The certificate (. CER) of the signer must be added to the Trust Store.
- E. The Trust for Certify Signature certificate trust setting must be enable.

Answer: C, D

QUESTION: 69
