Filemaker 7 Developer Essentials

QUESTION: 114

Which statement is true about close scripts in FileMaker Pro 7 compared to prior versions of FileMaker Pro?

A. It is NOT possible to manually close a file, have the closing script run, but still have the file open as a hidden file .
B. Files that are opened as hidden files will have their close script run when you quit out of the application or solution.
C. Close scripts are NOT triggered when the last window of a file is closed if the file itself is not closing because another file with open windows references it.
D. Close scripts are triggered when the last window of a file is closed EVEN IF the file itself is not closing because another file with open windows references it.

Answer: D

QUESTION: 115

For FileMaker Pro 7 files that are opened by implicit reference (to resolve a relationship) and that do not automatically draw a window, which statement is true about an open script?

A. It will not execute.
B. It will execute as soon as the file is opened.
C. It will execute as soon as the first window is drawn.
D. It will execute when the file is opened only if the script has the run script with full access privileges option enabled.

Answer: C

QUESTION: 116

Two windows in a FileMaker Pro 7 database are displaying records from the same layout and neither window is showing all records from that table. Which two statements are true? (Choose two.)

A. If records are imported into the table that underlies the two windows, the found set in both windows will change.
B. If a new record is committed in one of the two windows, the new record will be in the found set of both windows.

C. If records are imported into the table that underlies the two windows, the found set in the active window will change.

D. If a new record is committed in one of the two windows, the new record will be in the found set in the active window only.

Answer: C, D

QUESTION: 117

Two windows in a FileMaker Pro 7 database are displaying the same found set of records, on the same layout, in Browse mode. What happens if a user begins editing a record in one window, then switches to the other window and attempts to edit the same record?

A. They will be prevented from entering the record in the second window.

B. Any changes made to the record in the first window will be undone (reverted).

C. When they start to type, they will see a dialog warning that the record cannot be modified because it is already being modified in a different window.

D. They can make changes to the record in the second window, but if they try to submit the record they will see a dialog warning that the record cannot be modified because it is already being modified in a different window.

Answer: C

QUESTION: 118

What is required to directly open a file stored as a file by double clicking in a container field?

A. The FileMaker file must be single user.

B. The file must be stored as a reference.

C. The file must be on the local hard-drive.

D. The application of the file must be open.

Answer: B

QUESTION: 119

Which two calculations set to return a text result retrieve the complete path to a file stored by reference in a container field named MyPicture in a FileMaker Pro 7 database? (Choose two.)

A. MyPicture
B. Get(FilePath)
C. Evaluate (MyPicture)
D. GetAsText(MyPicture)

Answer: A, D

QUESTION: 120
