QUESTION: 14

How does the HP P4000 LeftHand SAN overcome the capacity utilization and complexity challenges of traditional storage? (Select two.)

- A. It is managed from a Centralized Management Console (CMC).
- B. It is deduplicated to control growth.
- C. It can scale performance and capacity online, without disruption.
- D. It is built on industry standard components.
- E. It is application snapshot aware.

Answer: A, C

QUESTION: 15

What does the storage clustering software increase each time additional P4000 nodes are added in an HP P4000 LeftHand SAN?

- A. complexity and availability
- B. performance and complexity
- C. autonomic management
- D. capacity and performance

Answer: D

Explanation:

Each time a storage node is added to the HP P4000SAN, the capacity, performance, and redundancy of the entire storage solution increases.
