Tibco Businessworks 5.x

QUESTION: 104

What are two recommended ways to manage changes required to migrate a BusinessWorks application from test to production status? (Choose two.)

- A. You build the process archive in TIBCO Designer and modify the archive name while importing into TIBCO Administrator.
- B. You copy the project files to a new directory. You run the migrate XPath Macro processing script which performs a global search and replace.
- C. Global Variables are used to define any resource that must change. At migration time, these Global Variables are updated via the TIBCO Designer.
- D. Global Variables are used to define any resource that must change. At migration time, these Global Variables are updated via the TIBCO Administrator.

Answer: C, D

QUESTION: 105

You are migrating your test environment to production and want to change the TIBCO Rendezvous service port used in this project from 7200 to 7400. What is the recommended method to accomplish this task before deployment?

- A. modify the server DAT file using a text editor
- B. modify the TRA file to add the service parameter
- C. open the project in TIBCO Administrator, change the service variable, and deploy
- D. use a Global Variable to set the service variable and change it before completing deployment

Answer: D
